## Skills

---

|                                   |                                                                                                                                         |
|-----------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------|
| <b>Programming Languages:</b>     | JavaScript, TypeScript, Python, Java                                                                                                    |
| <b>Libraries/Tools/Databases:</b> | React, Angular, Jenkins, FastAPI, Spring Boot, DynamoDB, Linux/Unix, MongoDB, Docker, Pandas, Next.js, Socket.io, Azure, SQL, AWS, Bash |

## Work Experience

---

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                                                                                                                                                                                               |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Software Engineer - Paywell Solutions</b><br>- Optimized serverless web scraper performance using <b>NodeJS</b> , <b>AWS Lambda</b> , and <b>Puppeteer</b> , resulting in <b>200% faster</b> runtime and <b>cutting compute cost by 2/3</b><br>- Discovered and patched <b>3 critical security vulnerabilities</b> using <b>NodeJS</b> , <b>Firebase</b> , and <b>Puppeteer</b> , which allowed access to <b>paying customer accounts and data</b><br>- Architected and implemented migration of our core business logic from frontend to a dedicated backend, decreasing application's peak memory usage from 2gb to 200mb.               | Chicago, IL (Remote)<br>Dec 2024 - Jun 2025<br>Aug 2025 - Now<br><a href="https://paywell.solutions/">https://paywell.solutions/</a>                                                          |
| <b>Software Engineer Intern - Fidelity Investments</b><br>- Built a <b>web app</b> and <b>REST API</b> using <b>Angular</b> and <b>Spring Boot</b> , allowing financial analysts to onboard financial products, saving hours of DB developer time<br>- Implemented web-based <b>data visualizations</b> using <b>D3.js</b> , <b>Angular</b> , and <b>TypeScript</b> , leading to intuitive user interactions with our data                                                                                                                                                                                                                    | Smithfield, RI<br>Jun 2024 - Aug 2024<br>Jun 2025 - Aug 2025<br><a href="https://www.fidelity.com/">https://www.fidelity.com/</a>                                                             |
| <b>Full-Stack Engineer (Contract) - DataNext Solutions / Megaship.ai</b><br>- Implemented an authentication system with email verification using <b>next-auth</b> , <b>AWS SESClient</b> , <b>MongoDB</b> , and <b>EJS</b> for a user-friendly and secure auth process<br>- Built a project monitoring dashboard using <b>TypeScript</b> , <b>React</b> , and <b>Chart.js</b> , allowing users to see real-time data visualizations of their projects' performance<br>- Implemented <b>Jenkins Pipelines</b> with GitHub and AWS API integration, <b>100% automating customers' deployments</b> of next.js applications to AWS infrastructure | Chicago, IL (Remote)<br>Apr 2024 - Jun 2024<br><a href="https://datanextsolutions.com/">https://datanextsolutions.com/</a><br><a href="https://www.megaship.ai/">https://www.megaship.ai/</a> |
| <b>Undergrad Computer Science Researcher - UMass Boston</b><br>- Fully ported state management library from Racket to <b>JavaScript</b><br>- Wrote <b>documentation</b> using <b>JSDoc</b> , resulting in coverage of 100% of the library                                                                                                                                                                                                                                                                                                                                                                                                     | Boston, MA<br>Dec 2023 - Jan 2024<br><a href="#">NPM Package</a>                                                                                                                              |
| <b>Software Engineer Intern - PressKit.ai</b><br>- Developed a <b>web scraper</b> to keep track of the accuracy of our data using <b>Python</b> , <b>Selenium</b> , and <b>MongoDB</b> , automating 10% of the data upkeep process                                                                                                                                                                                                                                                                                                                                                                                                            | New York, NY (Remote)<br>Sep 2023 - Dec 2023<br><a href="https://www.presskit.ai/">https://www.presskit.ai/</a>                                                                               |
| <b>Undergrad Computer Science Researcher - UMass Boston</b><br>Improved compiler playground by adding several examples, removing all jQuery usage, migrating from Bootstrap 3 to 5, updating Dockerfile to use best practices                                                                                                                                                                                                                                                                                                                                                                                                                 | Boston, MA<br>Jun 2023 - Sep 2023<br><a href="http://play.racketscript.org/">http://play.racketscript.org/</a>                                                                                |

## Projects

---

|                                                                                                                                                                                                                                                                                                                                                                                                                              |                             |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|
| <b>QR Pigeon - Fast online file-transfer tool using QR codes</b><br>- Implemented and deployed this <b>open-source</b> and free file transfer tool using <b>Python</b> , <b>Flask</b> , <b>JavaScript</b> , and <b>Azure</b> , resulting in a total of <b>400 uses</b> so far (there's a live count on the website)<br>- Built a <b>CI/CD pipeline</b> using Github actions and bash, resulting in 100% automated deployment | <a href="#">Github repo</a> |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|

## Education

---

|                                                                                   |                                   |
|-----------------------------------------------------------------------------------|-----------------------------------|
| <b>University of Massachusetts Boston</b><br>BS Computer Science <i>GPA: 3.75</i> | Boston, MA<br>Sep 2022 - Dec 2025 |
|-----------------------------------------------------------------------------------|-----------------------------------|

## Community Involvement

---

|                                                                                                                                                                  |             |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|
| <b>Club President - UMass Boston Computer Science Club</b><br>Conducted over weekly meetings. Organized guest speakers from <b>Google</b> and <b>Microsoft</b> . | 2022 - 2025 |
